Crops are dependent for success or failure on so many factors besides the seeds themselves that it is impossible for us to give any warranty. This does not mean that we lack confidence in the seed we sell, but we have no control after they leave our possession. If we should warrant or guarantee our seeds, we would be held responsible for the crop, regardless of cause and this is a responsibility that we cannot and will not accept.

NON-WARRANTY. The Steckler Seed Co., Inc., gives no warranty, express or implied, as to description, quality, productiveness, or any other matter of any seeds (bulbs, or plants), it sells and will not be responsible for the crop.

Steckler's Cotton Seed

Selected Varieties

Delfos Cotton

Planting time, March and April. One bushel is required to plant one acre. Thoroughly break and prepare the ground early. Rows should be 3½ to 4 feet apart and hills 12 to 14 inches apart in the row. When the cotton comes up it should be off-barred deep while it is small in order to let the heat of the sun strike the beds. As the plants get larger, shallow down and towards the last, cultivate very shallow. Always keep the top crust of the ground broken in dry weather, as it prevents it from losing its form. Never stop plowing for wet weather until the ground turns in slices; then quit immediately until it dries off. Never lay-by until the middle of August. The first week in April has been found to be the best time for planting cotton.

NOTE:—All of our Cotton Seed is free from Boll Weevil. These are all good varieties which have been thoroughly tested and recommended by Agricultural Colleges and Experiment Stations of the Southern States.

STRAWBERRY SHOOKS OR DIRT BANDS

STRAWBERRY SHOOKS OR DIRT BANDS. Eggplants, Muskmelons and Early Cucumbers pay well if they come early into the market. In order to have them early, it is a good plan to start them in a cold frame in what are called "Dirt Bands." This is a box 4 inches square and 4 inches deep, without bottoms. These are placed in a frame and filled up with good rich soil, and five or six seeds in each box; when the plants come up, thin them out to one or two in each box. Before using dirt bands, wet them thoroughly before bending or they will be apt to break at the grooves, as they are made of thin veneered wood. **60c per 100; $3.00 per 1000, not prepaid.** Tacks for Dirt Bands and Boxes, ¼ **lb. 15c; lb. 50c, postpaid.**

Flower seeds require a little more care in sowing than the vegetable seed. The ground should be well pulverized and light enough not to bake after a rain. Some of the more delicate and finer varieties are better sown in boxes or seed pans, where they can be handled and protected from hard rains or cold weather, the other kinds do not transplant well, and are better sown at once where they are to remain.

All flower seeds in packages are mailed free of postage to the purchaser. Where there is more than one color, we generally import them mixed, as we find that most of our customers do not wish to purchase six packages or more of one variety to get all colors. One package of Asters, Zinnia, Phlox, Chinese Pink, Stocks, Petunia, Portulaca and others will always contain an equal mixture of the best colors.

WORMOIDS

Wormoids

For Worms in Poultry. Most flocks are infected with worms. These parasites sap the health and vitality of the fowl, interfere with laying, stunt development and cost the poultry raiser thousands of dollars every year. Symptoms are drooping plumage, general weakness, loss of flesh or "going light," oftentimes paralysis and death. **Wormoids** is an individual treatment that is prompt, sure and safe. It comes in capsule form and is easily administered to every bird, usually at the same time the flock is culled, banded or treated for lice. Costs no more than flock treatments and is of course more sure and satisfactory. Come in following sizes:

50 capsules — **Postpaid** **$1.00**
